

I have **GREAT NEWS!**

Commercial Business Services is here to help everyone get back to work safely.

[Commercial Business Services](#) has specialized in integration for the past 30 years. We are designing and automating installations in boardrooms, office buildings, theatres, and so much more. Now with Covid-19, our team of experts has refocused on working with manufacturers of thermal imagery. To assist businesses with innovative ideas to get shops open and safe for staff and the general public.

We are working on the new normal:

We integrate cutting edge thermal hardware technology with customized software to go above and beyond just checking for a fever. We can incorporate our [smart thermal camera](#) features into an existing IP security system to trace the interactions of someone who ended up with a fever, thereby limiting the spread and duration of an infection. This illness monitoring and contact tracing can all be accomplished without compromising privacy. We have a large variety of products to accommodate your requirements.

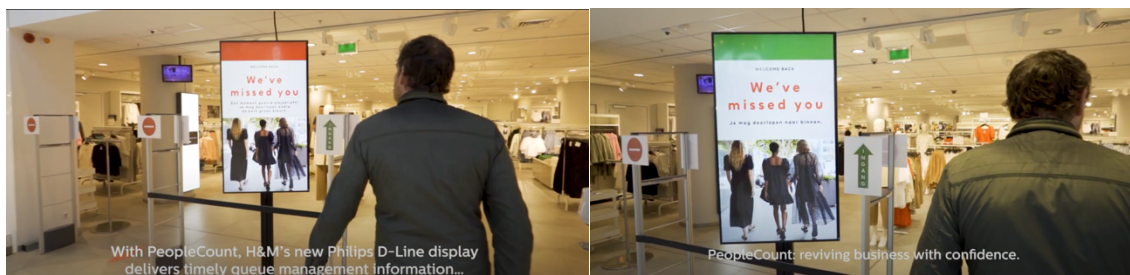

[KHS22FL Wellness/Sanitary Digital Kiosk](#) is an innovative, sleek solution engineered with screening and mitigation technologies to make workplaces and public spaces safe for staff and customers without compromising esthetics of your workplace. This simple freestanding sanitary station provides thermal information, masks and gloves to keep everyone safe and informed.

Features:

- **High Res Digital Display**
(shows results, advertisements, regulations, announcements, etc.)
- **Automatic Sanitizing Gel Dispenser**
(fits gallon jugs)
- **PPE Dispenser**
(nitrile glove and face mask box holder)

[PeopleCount](#) solution is in high demand as the world begins to re-open after COVID-19. Stay compliant with local regulations without a lot of human resources. We are dedicated to bringing the solutions to the market that matter most at this moment. We're continuing to develop new aspects to the PeopleCount solution as you need them. Reach out if you have custom needs in mind, or would like further details.

Custom Applications: [Deva](#)

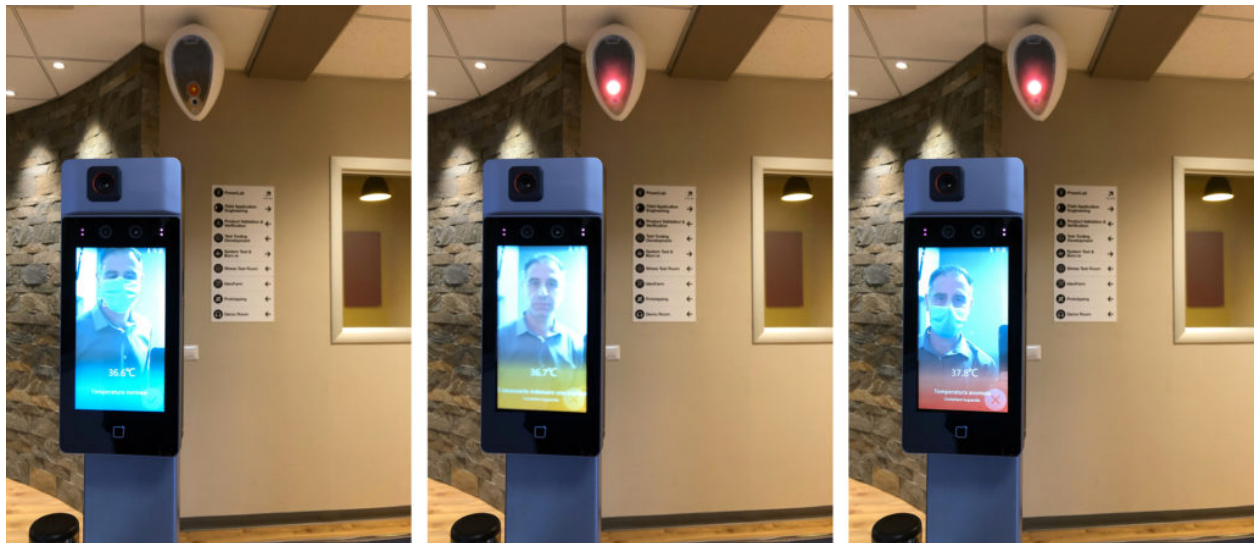

[Deva](#) is a convergence of multiple devices. They can be easily deployed anywhere, enabling automated and direct interaction with the public. Below is just a sample of some of the features:

SUPPORTING SOCIAL DISTANCING

Deva offers a series of functionalities that make it a powerful safety device capable of identifying the number of people in an area while responding in real-time when the number of people goes beyond set limits. This counting feature prevents people from assembling in larger than allowed groups, helps enforce social distancing regulations and keeps you compliant to the rules introduced to combat the spread of Covid-19.

BODY TEMPERATURE DETECTION

Deva can be easily integrated with a body temperature sensing system to help screen employees or visitors. The ability to provide early symptom detection makes Deva a smart tool for preventing further transmission of viral pathogens and limits the spread and duration of illnesses.

Deva is an active control device that can replace security personnel if needed. Thanks to its ability to interact with third-party software and applications, Deva can block turnstiles and doors and prevent access to visitors and employees who are not wearing face-masks or who have been detected to have a body temperature above the threshold level.

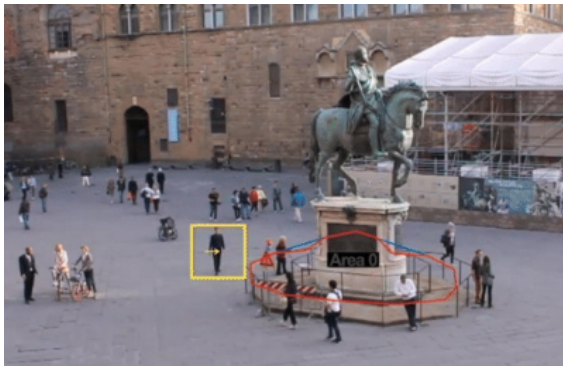

SOS AND PUBLIC WARNING MESSAGING

Deva can be used to achieve total coverage in any space, both indoors and outdoors, for real-time or recorded emergency messaging, with the high performance, full-range speaker. Integration into existing evacuation

systems is also possible thanks to its advanced connectivity options.

ABANDONED OBJECT DETECTION

Deva can spot an abandoned object through its eye, and automatically alert the predetermined contacts. With response time being quintessential in safety matters, Deva ensures that quick actions are taken to quickly secure the area decreasing risk to the public.

FENCE CONTROL CAMERA

Deva can be the first to witness an intruder and trigger an audible alarm while informing administrators. The administrators can create virtual perimeters and prevent access to a specific site while ensuring that the public and property are kept safe and far away from danger.

This product is very feature-rich, and can do even more than what is listed here -

Give us a call, and let us consult with you to find your perfect solution.
